

IST METZ THE LEADING EXPERT FOR UV, LED UV, IR AND EXCIMER

The IST METZ international group of companies was founded in 1977 and has more than 550 employees worldwide. For more than 45 years, the company has been producing systems for curing print and coatings using UV light. The UV systems cure inks, varnishes, silicones, adhesives, resins and other materials in fractions of a second. The IST Metz Group offers its customers the world's largest product portfolio of high-performance UV lamp and UV LED systems. The range of services is supplemented by hot-air/infrared drying systems and excimer lamps.

THE IST METZ GROUP OF COMPANIES

The IST METZ Group is made up of 11 companies including the production subsidiaries eta plus electronic gmbh. The group in Germany develops and manufactures the core components of the UV systems to the highest quality standards. These include, among other things, reflectors, electronic power supply devices and UV lamps with a direct impact on the curing result. Ten sales offices in France, England, Italy, the USA, the Netherlands, Spain, Sweden, China and Thailand provide support for local customers. An additional network of agencies ensures a global presence.

IST UV TECHNOLOGY FOR INDUSTRIAL APPLICATIONS

UV units of IST METZ with different working widths are used for the curing of two-dimensional or three-dimensional parts. A big advantage is the very compact and space-saving design of the units. Because of shorter drying distances they need less space. Surface treatment in industrial application makes special demands on the techniques used because of the three-dimensional objects involved.

IST UV TECHNOLOGY IN THE GRAPHIC ARTS INDUSTRY

In the graphic arts industry, UV and thermal drying systems have been specially developed for either direct or mobile installation for all press types including: sheet-fed offset, rotary offset, narrow and wide web flexo, letterpress printing, screen printing, stamp printing, metal decorating and varnishing.
