

**URS<sup>®</sup> Reflector Technology**

## URS<sup>®</sup> reflector technology offers many benefits:

- Optimum reflector geometry for each production process
- Specific coatings (URS<sup>®</sup>, URS<sup>®</sup>-A, URS<sup>®</sup>-C) to meet the exact requirements of different applications
- Selective, controlled heat management via a special absorption layer
- Easy to use, solid construction
- Easy cleaning of the reflector and the UV lamp

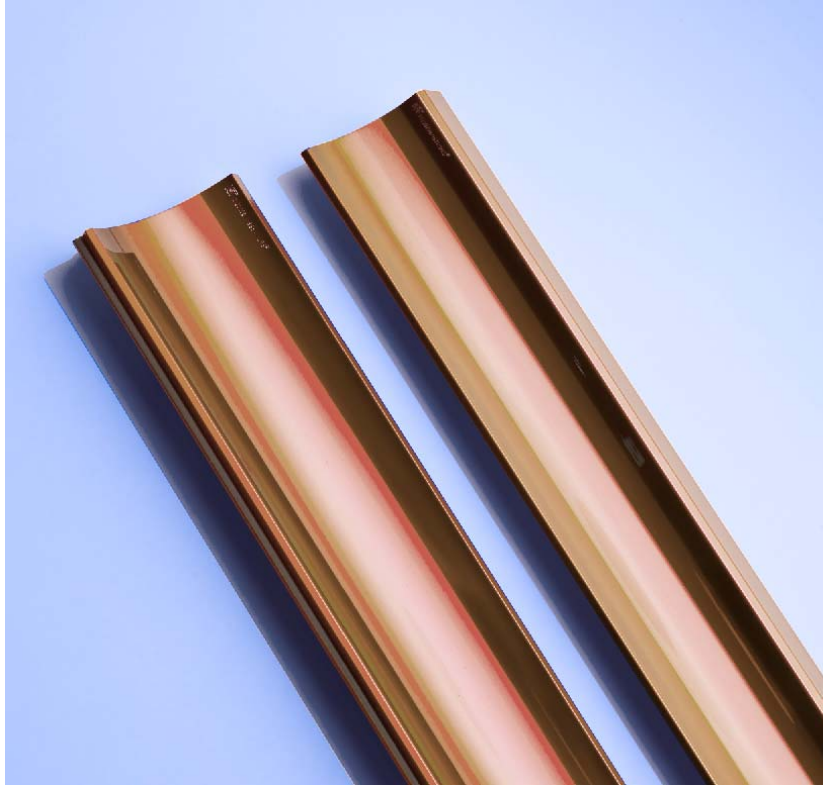

# Reflective properties

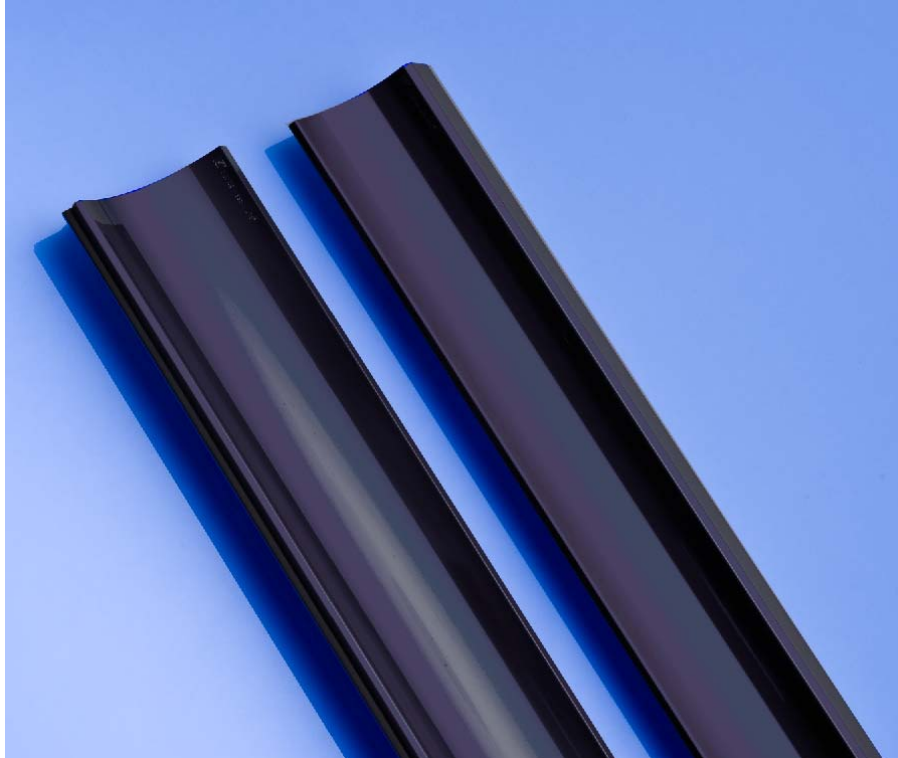

- High reflectance over the whole UV range
- Minimal reflexion of IR-rays (heat)
- Especially for heat-sensitive substrates

# URS<sup>®</sup>-A Reflector

- High reflectance over the whole UV range
- Reflexion also of IR-rays
- Especially for applications, which need thermal support in the drying process

# URS<sup>®</sup>-C Reflector

- Optimised reflectance in the UV-C range
- Minimal reflexion of IR-rays (heat)
